

CCL-FORENSICS CAPABILITY STATEMENT

MOBILE PHONE FORENSICS

Media

CCL-Forensics is able to recover the following information from all generations of mobile phone handsets and SIM cards:

- Text Messages
- Multimedia Messages
- Phone book/address book
- Call records
- Videos
- Photos
- Calendar Entries
- Notes/To Do List
- WAP URLs
- E-Mails
- Java applications
- Other Files stored on handset/memory card
- SIM Card IMEI History
- Subscriber Information
- Last Cell Location

CCL-Forensics can also recover information from 'smart' phones and can recover memory image, databases and OS registry where applicable.

Services

CCL-Forensics offers the following services for mobile phones:

1) Intelligence Preview

Providing a basic, non evidential report on a selection of the items listed above, this service is intended to help establish whether full analysis will be required.

2) Full Analysis

Full Mobile Phone analysis covering all information listed above including a Witness Statement.

3) Recovery of Deleted Data (Hex Dumping)

CCL-Forensics is constantly investing in developing new techniques for the recovery of deleted data and is able to recover data from a wide range of models.

4) Damaged Phones

Even though a handset may be damaged, CCL-Forensics can recover data stored within the memory.

5) Cell Site Analysis

Examination and mapping of cell site data to produce a thorough report and Witness Statement.

Additional Support

In some cases information is needed from a phone before a full DNA report can be carried out. CCL-Forensics is able to carry out investigations on a 'clean bench' eliminating the risk of evidence contamination.
